Error Log Entry

What error message did you encounter (if any)?

Error: Could not find or load main class Mastery.MainVehicle in module Chapter8

What unexpected behavior did your program exhibit?

I was getting a weird output message about a previously deleted file.

What caused the issue? (e.g., syntax error, logic error, incorrect function usage, etc.)

I think eclipse hadn't fully recognized that I had deleted that file so it was still trying to find it.
(that is apparently a decently common thing with other eclipse users from what I read)

Include a screenshot of specific lines of code.

There were no lines; it was something to do with some of my deleted files.

How did you fix the issue?

I made a different package and reimplemented the code into new classes and it worked from there.

Provide the corrected code or solution using a screenshot.
