

Credit Name: CSE 3130 Object-Oriented Programming 2

Assignment Name: Vehicle, Car, Truck, Minivan

Error Log Entry

What error message did you encounter (if any)?

My output would be ok but then I would get random numbers and letters and symbols in places.

Vehicle List:

Mastery.Car@7e6cbb7a (Car), Doors: 4

Mastery.Truck@20ad9418 (Truck), Tow Capacity: 8000.0 lbs

Mastery.Minivan@6433a2 (Minivan), Seats: 7

What unexpected behavior did your program exhibit?

I was getting weird outputs from my console but there were no lines underlined in red.

What caused the issue? (e.g., syntax error, logic error, incorrect function usage, etc.)

It was a method naming error. This was an error Mr. Abdullah briefly explained in class during one of our skillbuilders which helped me solve it because it doesn't look like there is an error when there actually is a subtle one because nothing is underlined in red.

Include a screenshot of specific lines of code.

```
public String ToString() {  
    return year + " " + make + " " + model;  
}
```

How did you fix the issue?

I just made the T lowercase so that it was an actual `toString` method.

Provide the corrected code or solution using a screenshot.

```
public String toString() {  
    return year + " " + make + " " + model;  
}
```
